

CSE260

Assignment 01

This assignment must be handwritten. Show ALL steps in ALL questions.

1. Subtract 132 from 547 in 11 bits using 2's complement number system and justify whether there is an overflow or not.

132 = 10000100

+132 = 010000100

+132 in 11 bits = 00010000100

-132 in 11 bits = 11101111011

+1

11101111100

547 = 1000100011

+547 = 01000100011

+547 in 11 bits = 01000100011

01000100011

11101111100

10011001111

Final result = 00110011111

NO overflow since we are adding 2 different signed numbers and we got the result as expected.

2. Convert the following from Excess 4 to the original number:
(101101100111.01011001)_{Excess-4}

(101101100111.01011001)

1011 = 11, 0110 = 6, 0111 = 7, 0101 = 5, 1001 = 9

Subtracting 4 from each gives the original number = 723.15

3. Multiply the following in the given base: $(34)_9$ with $(87)_9$
NB: You must show the whole procedure.

$$\begin{array}{r}
 87 \\
 34 \\
 \hline
 381 \\
 283 \\
 \hline
 3 \ 3 \ 2 \ 1
 \end{array}$$

4. Divide $(444)_7$ by $(25)_7$
NB: You must show the whole procedure.

$$\begin{array}{r}
 25 \] \ 444 \ [\ 15 \\
 25 \\
 \hline
 164 \\
 164 \\
 \hline
 0
 \end{array}$$

5. You are a computer engineer and you want to buy two 8 GB DDR4 RAMs.
Each RAM costs $(1C2)_{16}$ dollars. You also want to buy a graphics card

RTX4070Ti which costs $(10010110000)_2$ dollars. However, you don't have that much money with you and you are afraid to ask your parents about it. Suddenly, one of your generous friends agreed to give you the money you need. He decided to give you $(4064)_8$ dollars. How much will you have left after buying those components? (Show the answer in decimal)

$$\text{Ram Cost} = (1C2)_{16}$$

$$1C2 = 1 \times 16^2 + 12(C) \times 16^1 + 2 \times 16^0 = (450)_{10}$$

$$\text{Graphics card cost} = (10010110000)_2$$

$$= 1 \times 2^9 + 0 \times 2^8 + 0 \times 2^7 + 1 \times 2^6 + 0 \times 2^5 + 1 \times 2^4 + 1 \times 2^3 + 0 \times 2^2 + 0 \times 2^1 + 0 \times 2^0$$

$$(10010110000)_2 = (1200)_{10}$$

$$\begin{aligned} \text{Total Cost} &= 450 \times 2 + 1200 \\ &= 2100 \end{aligned}$$

$$\text{I got} = (4064)_8$$

$$\begin{aligned} (4064)_8 &= 4 \times 8^3 + 0 \times 8^2 + 6 \times 8^1 + 4 \times 8^0 \\ &= (2100)_{10} \end{aligned}$$

$$\text{Remaining} = (2100 - 2100)_{10} = (0)_{10} \text{ dollars}$$
